

Cloud computing is an enterprise reality today and the challenge of securing it lies not only in the technology but also in the policies and control frameworks around it. As 'user's fault' will continue to be the top cause for data exploits, enterprises must ensure robustness in their policies to defend against threats. In turn, this will lead to the rise of organizational challenges, which consequently will drive the spend in securing cloud infrastructure to grow.

Client Challenges

Infosys Offerings

Infosys Cloud Security, part of Infosys Cobalt, help clients secure their cloud migration and transformation journey to build a cyber-resilient and compliant cloud ecosystem

Enterprises can now leverage the full potential of cloud ecosystem to increase business value and speed to market.

Cloud Security Strategy and Architecture

We define cloud strategy and architecture for effective cloud security posture

Cloud Security Assessment Services

We conduct security review of cloud migration readiness and roadmap definition, security assessment for cloud applications, cloud APIs and integrations, cloud forensics and e-discovery assessments

Cloud Managed Security Services

We provide ongoing monitoring and support of one or more security controls for the cloud

Cloud Security Governance

We design and build cloud security governance policies and process frameworks, assess compliance with regulatory standards and identify gaps that need to be addressed

Cloud Security Solutions – Implementation and Support

We design and deploy multi-tenant cloud security solutions including discovery of critical assets and remediation of identified threats
